

On Site Services

As part of development and construction, there will normally be requirements for on site testing at all stages of the civil engineering works. The scope of testing is likely to include all construction materials used on a site, as well as in-situ assessment of the ground conditions prior, during and post construction. Enverity is highly experienced in all phases of this process and highly competent in undertaking a wide range of on site testing techniques.

▪ In-situ Testing

- California Bearing Ratio
- Plate Load Test
- In-situ Permeability
- In-situ Density Measurement
 - Nuclear Density Meter
 - Core Cutter
 - Sand Replacement Density
- Moisture Condition Value
- Shear Vane Testing

▪ On Site Sampling

- Aggregates
- Asphalt Materials
- Concrete
- Stabilised Soils
- Soils

In addition, we are able to offer supplementary ground investigation services

▪ Trial pits

- Hand Dug
- Machine Excavated
- Foundation Inspection Pits

▪ Hand Auger Boreholes

▪ Driven Continuous Sampling

▪ Conventional & Restricted Access Cable Percussion
